## EDUCATION

**University of British Columbia**  
*Bachelor of Science, Computer Science*

Vancouver, BC  
Sep 2022 – May 2028

## WORK EXPERIENCE

**Software Engineer Intern - Animation**  
*Electronic Arts*

May 2026 –  
Vancouver, BC

- Owned a novel game engine animation feature with **C++** and **C#/WPF**, from requirements gathering and stakeholder feedback sessions through implementation, QA, and deployment to across partner teams
- Diagnosed and fixed animation runtime bugs by tracing root cause through a multi-stage physics pipeline, resolving a critical fidelity issue in a shipped game title
- Designed and implemented a data migration tool in C++ to upgrade legacy binary assets, enabling teams to seamlessly upgrade tooling without workflow interruptions

**Software Engineer Intern**  
*TTT Studios*

May 2025 – Dec 2025  
Vancouver, BC

- Optimized **GitHub Actions** CD pipeline to reduce deployment time by 50%, improving development velocity and accelerating feature delivery
- Automated client infrastructure provisioning on **Azure** with **Docker** and **Terraform**, reducing setup time from 2 hours per client to 5 minutes
- Led client demos and feedback sessions for AI-powered automation tools, iterating on scope to reduce routine work by 85% and free teams for higher-value tasks

**Full-Stack Developer Intern**  
*Salyx Medical Inc.*

Jan 2024 – Oct 2024  
Remote

- Refactored **Express** API with asynchronous programming, improving response times by 300%
- Architected and maintained a **PostgreSQL** database by implementing RBAC and PIPEDA compliance, safeguarding thousands of sensitive user records
- Spearheaded API documentation for over 40 endpoints using OpenAPI to enable cross-team collaboration

**Database Developer Intern**  
*RR Donnelley*

June 2023 – Jan 2024  
Remote

- Implemented scripts to convert client data into **XML** format, reducing manual labor by 10+ hours per week and enabling the marketing team to seamlessly generate targeted client mailers

## PROJECTS

**3D Game Engine** | C++, OpenGL

- Designed and implemented Entity-Component-System to enable rapid feature development
- Built an OpenGL renderer implementing model/view/projection transformations and camera matrices to render 3D scenes in real time
- Implemented a sphere-triangle collision detection algorithm, enabling user to interact with level geometry

**Cafe Simulator Game** | Godot, GDScript

- Creating a 2D restaurant tycoon game with Godot and GDScript
- Built state-based behaviour system for customer NPCs
- Utilized scene and signal systems to manage gameplay loop and player interactions

## TECHNICAL SKILLS

**Programming:** C, C++, C#, Python, TypeScript, JavaScript/HTML/CSS, Java, SQL, Node.js, Express.js, Vue.js, Flask

**Cloud & DevOps:** Azure, Docker, Terraform, GitHub Actions

**Tools:** Frostbite, Perforce, GitHub Copilot, Claude Code, PostgreSQL, MongoDB, MySQL, Git, Linux, Firebase, Postman, OpenGL
