

# TYLER SMITH

Year 4, Computer Science Major  
331-228-1563 | [tylersmith1308@gmail.com](mailto:tylersmith1308@gmail.com) | [github.com/tylerqube](https://github.com/tylerqube)

## EDUCATION

**University of British Columbia**  
*Bachelor of Science, Computer Science*

Vancouver, BC  
Sep 2022 – Apr 2027

## WORK EXPERIENCE

### Software Engineer Intern

*TTT Studios*

May 2025 – Dec 2025

*Vancouver, BC*

- Optimized **GitHub Actions** CD pipeline to reduce deployment time by 50%, improving development velocity and accelerating feature delivery
- Automated client infrastructure provisioning on **Azure** with **Docker** and **Terraform**, reducing setup time from 2 hours per client to 5 minutes
- Led client demos and feedback sessions for AI-powered automation tools, iterating on scope to reduce routine work by 85% and free teams for higher-value tasks

### Full-Stack Developer Intern

*Salyx Medical Inc.*

Jan 2024 – Oct 2024

*Victoria, BC*

- Refactored **Express** API with asynchronous programming (promises), improving response times by 300%
- Implemented and maintained a **PostgreSQL** database to protect thousands of sensitive user records
- Spearheaded API documentation for over 40 endpoints using **OpenAPI** to enable cross-team collaboration

### Database Developer Intern

*RR Donnelley*

June 2023 – Jan 2024

*Warrenville, IL*

- Wrote stored procedures with **MySQL** to automate the processing of millions of rows of client data
- Implemented scripts to convert client data into **XML** format, reducing manual labor by 10+ hours per week and enabling the marketing team to seamlessly generate targeted client mailers

### Software Developer Intern

*Asgard Data LLC*

Sep 2021 – Apr 2022

*Chicago, IL*

- Built dynamic **AWS QuickSight** dashboards to visualize client data, improving stakeholder visibility into key metrics and aiding data-driven decision-making
- Updated and built pages for **React** website to showcase client projects

### Web Developer Intern

*Block Bins LLC*

Sep 2020 – Apr 2021

*Chicago, IL*

- Designed and implemented responsive web application using **Vue.js** and **Firebase**
- Automated compost pickup requests with the Google Maps API, contributing to a growth of 800+ clients

## PROJECTS

### 3D Game Engine | C++, OpenGL

May 2024 –

- Designed and implemented Entity-Component-System to enable rapid feature development
- Writing data-serialization tool to load 3D environments, allowing for level creation
- Implemented a sphere-triangle collision detection algorithm, enabling user to interact with level geometry

### Sprouts Cafe Simulator | Godot, GDScript

May 2025 –

- Creating a 2D restaurant tycoon game with Godot and GDScript
- Built state-based behaviour system for customer NPCs
- Utilized scene and signal systems to manage gameplay loop and player interactions

## TECHNICAL SKILLS

**Programming:** C, C++, Python, TypeScript, JavaScript/HTML/CSS, Java, SQL, Node.js, Express.js, Vue.js, Flask

**Cloud & DevOps:** Azure, Docker, Terraform, GitHub Actions

**Tools:** GitHub Copilot, Claude Code, PostgreSQL, MongoDB, MySQL, Git, Linux, Firebase, Postman, OpenGL
